

NEW!

**Dimax Int. GmbH (Germany) presents
updated KS 4000 series inverter generators
in a new housing**

We are pleased to share this great news. Following current trends, our engineers have developed a **new exclusive design** specially for the Könnér & Söhnen® KS 4000 series generators. This series deserves special mention, as it has plenty of advantages, such as low-noise operation and convenient transportation. Furthermore, it boasts unique features and can run on LPG and gasoline. The new-season KS 4000iE S generator features an ATS output (Automatic Transfer Switch).

It is worth mentioning that model **KS 4000iEG S** of this series was the winner of the **German Brand Award 2022** in the two categories: Excellent Brands "Industry, Machines & Engineering" and "Product Brand of the Year".

EXCLUSIVE DESIGN

The new stylish housing designed by German engineers specifically for Könnér & Söhnen® accentuates the individuality of this series. The eye-catching exterior of the generators is particularly appealing to consumers.

ATS OUTPUT (model KS 4000iE S)

The KS 4000iE S inverter generator model features an 8-pin connector for the KS ATS 4/25 Gasoline ATS unit.

LPG OUTPUT (model KS 4000iEG S)

The gas cylinder connector previously found on the control panel is now on the side of the generator, allowing a more convenient unit operation without interfering with the control panel.

START UP GUIDE

The information sticker now shows the QR code, through which you will always find instructions for launching the inverter generator on gasoline and LPG. The housing has a special marking that facilitates the generator start-up and maintenance.

Being a responsible and customer-oriented company, Dimax Group is committed to constant development and improvement of its products to ensure maximum comfort of use.
